Building on ITIL and other Service Management practices

The domain of IT and IT Service Management is developing every day as a result of digitalization and digital transformation in all kinds of industries. This has led to a huge number of approaches, frameworks and best practices being used and applied throughout organizations. One of the most complex aspects of this is the fact that numerous of these methods can be applied for different purposes. VeriSM™ is an approach for the digital age that offers a way to combine previously acquired ITSM knowledge (for example ITIL or COBIT) with emerging technologies (IoT, Big Data etc). In this respect, VeriSM offers an opportunity to make the most of your previous investments whilst at the same time making your management approach more future proof.
